

SR 241 Loma Improvements

The SR 241 Loma Improvements Project provides lane improvements in each direction on 241 Toll Road from the junction of 133 Toll Road to north of 261 Toll Road. The project uses the existing roadway footprint to add one lane in each direction and shift southbound traffic onto the existing graded roadbed.

At a Glance

Project Status: Final design to restart in FY26

Location: 241 Toll Road between the 133 and 261 Toll Roads

Construction: Estimated Completion 2029

Investment: \$87.4 Million

Benefits

- Additional lanes for free-flowing traffic movement
- Improved travel efficiencies and roadway enhancements

Overview

As traffic volumes continue to increase on the 241 Toll Road during the morning and afternoon peak periods between the 133 and 261 Toll Roads, operational improvements are needed to maintain free-flow traffic conditions. The SR 241 Loma Improvements Project will add one lane in each direction and shift southbound traffic onto the separated roadbed between the junction of the 133 Toll Road and Santiago Canyon Bridge, just north of the 261 Toll Road. These improvements are consistent with the planned ultimate corridor envisioned in the original environmental document.
